APPLICATION FOR AMENDMENT TO PERMIT UNDER POLLU- TION CONTROL ACT, 1967 (Effluent)

Preamble—Northair Mines have been operating with a throughput of approximately 300 tons per day since May of 1976, essentially as a producer of gold, although lead and zinc concentrates are also produced. Because of changed water-flow conditions affecting the tailing impoundment area, operating procedures must now be revised. Based on a year's operating and monitoring experience, supported by on-site testing and laboratory work, it is now believed that contaminant levels in the tailing-pond supernatant can be kept at levels far enough below regulation thresholds to allow for discharge of the excess water derived mainly from precipitation and run off. Northair Mines is applying for an amendment to its present permit for this purpose.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

Northair Mines Ltd. (N.P.L.), of 333, 885 Dunsmuir Street, Vancouver, B.C. V6C 1N5, hereby applies to the Director for a permit to discharge effluent from a mining and milling operation located on the east slopes of Callaghan Creek, approximately 6.4 miles north of Brandywine Falls, into Anomaly Creek and Water Licence Creek, which flow south and discharge into Callaghan Creek, and gives notice of application to all persons affected.

The land upon which the works are located is Warman #2, Warman #3, Warman #5, Cat 23, Cat 24, Cat 26, Cat 35, and Bert #9 Fraction of the Northair Mines Ltd. (NPL) Mineral Claims; Lot 6013, Group 1, NWD.

The discharges shall be located at (1) Water Licence Creek, 3,400 feet, more or less, north of conc. building, for tailing-pond supernatant; (2) Anomaly Creek, 1,000 feet, more or less, south of conc. building for 3,500, 3,250, Discovery portal drainages; (3) Anomaly Creek, 1,800 feet, more or less, south of conc. building, for 3,700 portal drainage.

The quantity of effluent to be discharged is as follows: Average annual daily discharge (based on operating period), (1) 180,000, (2) 7,150,000, (3) 275,000 imperial gallons. Maximum daily discharge, (1) 720,000, (2) 3,110,000, (3) 360,000 imperial gallons.

The operating period during which the effluent will be discharged is continuous, except for (1) during low flow periods in Water Licence Creek.

The characteristics of the effluent discharged shall be equivalent to or better than Level A objectives for discharge into fresh water, for dissolved iron (0.30 mg/L), copper (0.05 mg/L), lead (0.05 mg/L), and zinc (0.5 mg/L), and for total mercury (0.001 mg/L) and cyanide (0.10 mg/L). Dissolved sulphates meet the tentative Level B objectives (250 mg/L).

The type of treatment to be applied to the effluent before discharge is tailing-pond decant—lime treatment, settling, and pH adjustment; mine portal water—settling-basins.

I, I. R. Knowles, Administrator, hereby certify that a copy of this application has been received by the Squamish-Lillooet Regional District.
